How it works

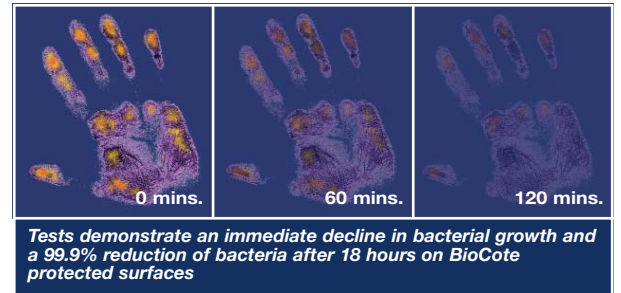

Silver, in the form of silver ions, is the active ingredient utilised in BioCote®. Silver is a natural antimicrobial and has been used for centuries for its abilities to aid preservation. Silver technology is also used extensively in the healthcare sector, for example in silver-coated wound dressings and catheters with dramatic reductions in infections.

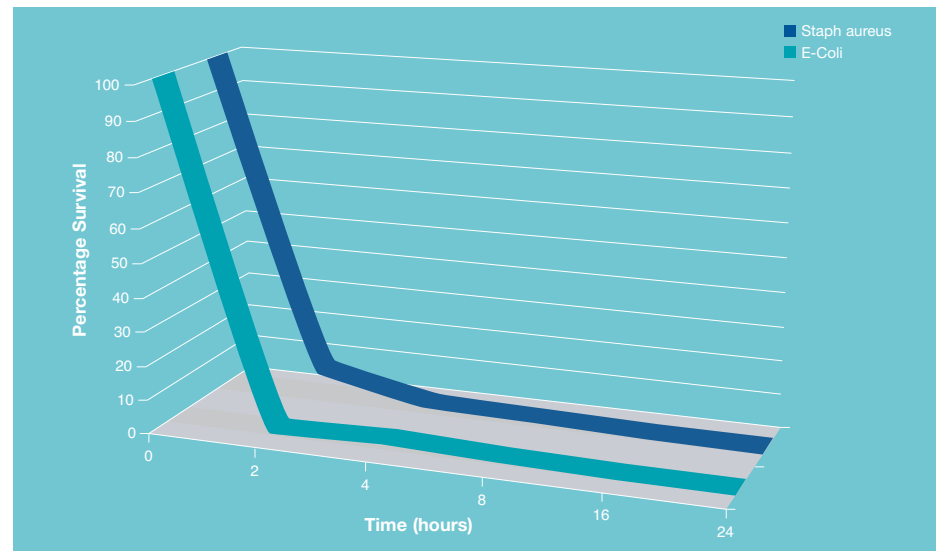

BioCote's silver technology has been tested by an independent laboratory to show its ability to inhibit the growth of bacteria, mould and fungi by up to 99.9% over a 24 hour period.

The results

BioCote's anti-microbial agent remains constant at the surface, interrupting and destroying the ability of cells to function, grow and reproduce. This reduces the risk of locker users bringing contamination into hygiene critical areas, such as patient care and food preparation, as well as into the general working environment.

As the premier UK locker manufacturer and supplier, Moresecure has exclusive rights to provide BioCote protection on lockers and other storage products.
